Reimagining Behavioral Health for California’s Children and Families

Family Voices
California's children's behavioral health system is underperforming.

There has been a 50% increase in mental health hospital days for children between 2006 and 2014.

Inpatient visits for suicide, ideation, and self-injury increased 104% for children 1 to 17 years between 2006 and 2011.

A total of $11.6 billion was spent on hospital visits for mental health between 2006 and 2011.
Most children get no support, and many receive the wrong kind, too late.
Confronting Child + Family Behavioral Health Needs

Regional Center Waiver
Medicaid

All are clear on what they won’t do….
Since 2011

There has been a 20% increase in the number of eligible children and a concurrent 9% decrease in the rate of children receiving services.

For those receiving services, there was a 20% increase in crisis services utilization.

Overall, the “Access” Rate has declined from an already low 4.5%, to 4.1%.
Confronting Child + Family Behavioral Health Needs

The *same* benefit that covers vaccines, covers mental health access…

Of 9,029,863 children

5,217,677 are on MediCal

96% insured with a mental health benefit

It is an *entitlement*, called Early Periodic Screening Diagnosis and Treatment
• Approximately 75% of mental illness manifests between the ages of 10 and 24. Since adolescents have the lowest rate of primary care utilization of any demographic group, it makes early warning signs difficult to detect.

• Provider shortages at the PCP and mental health practitioner level compound the challenge.

• Diagnosis-driven models are only appropriate for some children. Early identification and intervention is essential to any recovery framework.

How did we get here?

We have no common framework for defining and understanding behavioral health among and between public systems and clinical care providers.

Our public systems are deeply fragmented and under-resourced. Commercial payers have not effectively partnered with child-serving systems.

A lack of clarity over whether youth mental health care is an essential benefit or a public utility prevents commercial payers from fully engaging.

Our definition of medical necessity is outdated and inconsistent with emerging trends and evidence regarding the impact of trauma and adversity on social and emotional health.

The field is young. Many clinical modalities with widespread application are less than 20 years old.

TODAY THERE ARE 200 SCHOOL BASED BEHAVIORAL HEALTH PROGRAMS IN ALAMEDA COUNTY
We have new science and emerging practices that demonstrate the **promise** of behavioral health.

**AND**

There is striking **evidence** of a crisis.

**AND**

The Economic Imperative is aligned with the **social justice** imperative.

**AND**

We have learned at lot….and there is a way to finance **broad reform**.
Maximize federal funding by leveraging existing revenues. There are currently billions in unspent state and county dollars that are eligible for federal matching funds. We can expand funding for children’s services by billions without new state investment and can invest our existing state dollars in more effective ways. We see multiple pathways to better leverage the state funding provided to counties, finance federal entitlements, and incentivize counties to increase their investment of additional local resources to access federal financial participation.

Broaden access to services that children and youth need while enhancing quality, integration, and accountability for outcomes across child-serving systems. We can evolve our fragmented pathology driven mental health system into a unified approach that provides a foundation for resilience and healthy development by taking actions such as adopting anti-racism and poverty reduction goals and strategies; increasing the inclusion of children and families with lived experience in the design, delivery, and evaluation of behavioral health programs and strategies; developing plans to meet the obligations of the Federal Mental Health Parity Law; and encouraging consistent implementation of SB1287 (Hernandez), which clarifies the broad definition of medical necessity so that all children who need supports can access them.

Transform how we purchase services for children. We can create systems that pay for outcomes and are accountable to the experiences of children and families if we explore possibilities such as unifying child-serving departments by adopting a standard set of child well-being indicators, piloting collaborations that transform procurement practices, and implementing strategies to pay for value (meaningful outcomes) rather than volume (units of service).
WHY NOW?

• Growing consensus that current design and outcomes are unacceptable
• Growing revenues (MHSA AND REALIGNMENT) in the context of the EPSDT Entitlement.
• Federal waiver opportunities
• National movement towards integration
• New science and learning that highlights the promise of behavioral health
• New state administration
• Need for Family Systems Models
• Workforce Scarcity as Opportunity
• Lessons Learned—in California and across the nation
The Crisis is Real

So is the Opportunity
